
Phase–amplitude coupling across the stable parameter region
damping scale d (×10⁻³, log axis)
coupling g_vv
median detrended MI (100 seeds)
κ = 1
κ = 2
κ = 3
κ = 4
κ = 5
max MI 0.37
(g_vv = 9.8, d = 1×10⁻³)
edge of the included region
lower 95% bound of g*(d)
measured boundary λ̄₁ = 0 (direct scan)
excluded: g_vv ≥ lower 95% bound of g*(d)
white lines: iso-κ (MI is constant along them)
